***Election/Restrictions***

1. Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claims 1-13, 18-31,33, 34, 38-41, 43-51, 53-54, 58, 61, 63-81, 88-119, 126-148 and 155-162, drawn to a current driver circuit comprising a receiving part, a converting part and a driving part, classified in class 345, subclass 204.

Group II, claims 163-165, drawn to a display device comprising brightness information written in each pixel being held in each pixel even after the scanning line is not selected and the light emitting element of each pixel able to remain lighted by a brightness in accordance with the held brightness information, classified in class 345, subclass 690.

The inventions listed as Groups I and II do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the

Art Unit: 2629

instant case, the combination as claimed does not require the particulars of the subcombination as claimed because of group I of a current driver circuit comprising a receiving part, a converting part and a driving part, which does not operate with a display device comprising brightness information written in each pixel being held in each pixel even after the scanning line is not selected and the light emitting element of each pixel able to remain lighted by a brightness in accordance with the held brightness information in group II. The subcombination has separate utility of a current driver circuit comprising a receiving part, a converting part and a driving part in group I and a display device comprising brightness information written in each pixel being held in each pixel even after the scanning line is not selected and the light emitting element of each pixel able to remain lighted by a brightness in accordance with the held brightness information as shown in group II.

2. Because these inventions are distinct for the reasons given above and the search required for group I is not required in group II and III, restriction for examination purposes as indicated is proper.

3. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
